

Industry call for binding Renewable Energy target in 2030 package

Brussels, 17th September 2013

Dear Ministers for Energy,

Dear Commissioner for Energy,

Dear Commissioner for Climate Action,

The transition to a sustainable economy is a tremendous chance to boost economic growth and create new jobs while securing environmental protection. With the 20-20-20 policy framework the European Union (EU) has set a clear direction for its energy and climate policies up to 2020.

However, 2030 is already at our doorstep. Given the long investment cycles in the energy sector and the fact that investment decisions in the EU's liberalised energy markets strongly depend on reliability, certainty about the regulatory framework of the next 17 years is needed.

Such a framework bears the opportunity to reduce the current costs of uncertainty, mobilise the needed funding, help to protect the environment, decrease the costs of decarbonisation, facilitate the creation of new jobs and enhance the EU's technology leadership.

We, as a group of 65 European companies and associations, strongly believe that a new climate and energy framework for 2030 needs to be based on mutually reinforcing tools and targets, including a legally binding target for renewable energy, and urge all policy makers to support a strong and ambitious regulatory framework for the years to come.
